

WRAP SPAN AND DROP SPAN

WRAP SPAN

Whether for buildings, tree lines or unique field dimensions, the Reinke Wrap Span allows you to irrigate acres that were previously off-limits to center pivot irrigation. By placing the Wrap Span system in one or more joints (except the last bendable joint), you can wrap your pivot with or without the SAC or SSAC option up to 180 degrees.

Two configurations

- Wraps up to 10° – utilizes a standard joint
- Wraps up to 90° – uses a span joint that reroutes the water through a flexible coupler

DROP SPAN

The Reinke Drop Span lets you easily disconnect one or more pivot or lateral move spans and proceed past an obstacle to irrigate previously unreachable acres. It also enables you to pick up an additional span or spans of a different length if the field widens on the opposite side of the obstacle. Adjustable legs also allow you to keep the span off the ground when it's disconnected. Furthermore, the auto-stop function self-aligns the parent system to the dropped span for ease in connecting.
