

**6750 MAGNUM WITH DIETRICH SHANK**

REDUCE ENVIRONMENTAL IMPACT

Nuhn's aggressive research program has produced a wide selection of leading edge injection technology that allows for dramatic yield increases, and at the same time, reduces odour, and surface and sub-surface pollution. The rubber boot on each nozzle of the injector distributes the manure evenly to each tooth. Large coulters will cut most trash while the harrows level for a smooth finish.

INJECTION STARTS WITH THE TANK

Good injection starts with the spreader. Nuhn tanks are designed to give a more consistent product and rate control. Our lift mechanisms have high lift and the ability to adjust down-pressure to follow the contours of the field.
