

MAGNUM QUAD-TRAIN TANK

The workhorse of the industry

TOP LOAD CONFIGURATION

The Nuhn Quad Train, a multiple axle spreader, has gained popularity in the marketplace, both for its low maintenance and its reliability. The Nuhn Quad Train, with its unique and patented coupling system, is designed to perform as a single spreader. Its original design produces a tandem spreader capable of handling up to 15,000 gallons of manure that turns, backs up and handles more easily than a single large tank.

Available in 8000 - 15000 US GAL capacities. Top load, injection and vacuum configurations available.

EASILY CONTROLLED

The second tank follows in the first tank's tracks while turning. Stable and well balanced.

LARGE DIAMETER TIRES

Optional large diameter Alliance 35.5 x 32 R for greater flotation.

FRONT PUMP SYSTEM

Optional Header Series Front Pump unloads faster than the competition at 3000 GPM!

IN-TANK AGITATION

Agitation and in-tank mixing flow through both tanks. One port fills both tanks.

INJECTOR CONFIGURATION

MAGNUM QUAD-TRAIN TANK

The workhorse of the industry

CUSTOM MADE FOR EVERY OPERATOR'S NEEDS!

STANDARD FEATURES

- Long tongue for better weight control and balance
- Multiple axle tandem without moving parts
- Solid, unibody construction, double-welded, 1/4" tank
- Full length frame with cross members
- Front and rear clean-out doors for easy cleaning
- In-tank spray wash system
- In house built 25,000 lbs hubs and 6" spindles for the highest quality control
- Bearings positioned away from contact with manure

OPTIONAL FEATURES

- Brakes on all 8 wheels
- Self-load system
- Top load transfer boom
- Flow meter hardware
- Anti-foam funnel
- Rotating lights
- Additional illumination LED lights
- Option to add injectors or row crop units
- Available in vacuum configuration
