THE TANK

The 1/4" tank with unibody construction, solid welds inside and out, and full circle tensioned baffles are what makes Nuhn tanks unbeatable. The circular shaped tank keeps the center of gravity low, as opposed to a mushroom shaped tank with the center of gravity very high. The tank has a full light kit, with the lights to the outside of the tires and are designed to break away if they hit something. There is a large clean-out door at the rear of the tank. Nuhn Industries tanks have the strongest undercarriage in the industry, full length frame with cross members, in-tank spray wash system, and bearing positioned away from direct contact with manure.
